

Kennedy Kanu

Software QA Engineer

kanukennedy20@gmail.com | +2348158696616 | <https://kennedykanu.netlify.app/>

PROFILE

Mid-level QA Engineer with 4+ years of experience in automated and manual testing. Skilled in Postman API testing, Automation with Playwright, Functional testing with Dev Tools, and Non-functional testing. Experienced in integrating AI-assisted test workflows.

TECHNICAL SKILLS

Testing Tools: Playwright, Postman, Swagger, JMeter, Cypress

Mobile Testing: Andriod Studio, Proxyman, Appium

Automation & CI/CD: Playwright, JUnit, GitHub Actions, Jenkins, Maven

AI-Assisted Testing: Exploratory use of AI tools to augment test coverage and defect analysis, AI-driven test case generation

Cloud/DevOps: AWS, Azure DevOps, Kubernetes, Docker

Languages/DBs: Java, MySQL, MongoDB, PostgreSQL

Project Tools: JIRA, Slack, Git

WORK EXPERIENCE

Software QA Engineer
PayEdge

Jun 2024 - Present
California, USA (Remote)

- Designed and implemented a scalable automation framework using Playwright (Java) and JUnit frameworks, integrated with GitHub Actions CI/CD pipelines to validate end-to-end user journeys across authentication, payment workflows, dynamic discounting, and countdown automation modules.
- Championed shift-left testing practices in a cross-functional Agile team, embedding QA into sprint planning and design reviews for a complex supply chain finance platform, reducing UAT defect escape rate by 30%.
- Created 50+ detailed test cases covering functional, regression, white-box, black-box, and negative testing scenarios across 13 major modules, measurably increasing overall test coverage and reducing post-release defects.
- Executed deep-dive integration testing on 45+ REST APIs via Postman and Swagger UI, validating authentication flows, payload schemas, idempotent request handling, concurrency behaviors, CORS policies, and standardized error responses, thereby mitigating risks of duplicate processing and financial inconsistencies.
- Owned defect lifecycle end-to-end in JIRA which included detailed reproduction steps, API trace logs, and severity classification enabling developers to resolve issues 45% faster.
- Provided structured UX feedback to the frontend team on data validation gaps and flow inconsistencies, contributing to measurably fewer release rollbacks.

Software QA Engineer
ActivEdge Technologies

Apr 2022 – Jun 2024
 Lekki, Lagos (Hybrid)

- Partnered with 2 QA engineers in an 18-person cross-functional team to improve test cycle efficiency by 30% and raise the automated test pass rate from 70% to 92% within 5 months.

- Took ownership of test strategy for 8 core modules authoring 120+ test cases spanning functional, regression, and API testing, improving test coverage by 75% and significantly reducing missed edge cases during UAT.
- Led bi-weekly test code reviews and managed QA team pull request merges, reducing code duplication by 40% and catching 30+ defects before deployment.
- Logged 80+ defects in JIRA with 90% reproduction accuracy; detailed API trace logs helped reduce average bug-fix duration by 45%.
- Performed integration testing on 35+ REST APIs using Postman with Java scripting, uncovering critical authentication vulnerabilities and reducing integration failures by 60%.

Software Trainee Engineer

Computer Warehouse Group (CWG), Lekki

Sep 2021 - Feb 2022

Lekki, Lagos (Hybrid)

- Conducted manual and automated (Selenium) functional tests across multiple modules of an enterprise application, documenting findings in structured bug reports.
- Performed API testing using Postman with JavaScript scripting, identified and reported integration defects with clear reproduction steps.
- Collaborated with developers, product managers, and team leads to align test scenarios with system requirements and support timely delivery.

PROJECTS

PayEdge – Supply Chain Finance Platform

Led QA efforts in a complex financial environment. Designed 100+ high-coverage functional and API test cases using Postman and Swagger, contributing to a 75% reduction in API-related defects across 12 sprints. Automated core regression scenarios with Playwright, which improved deployment confidence and accelerated release velocity by 25%.

Stack: Java, Spring Reactive Web, KeyCloak, MySQL, Swagger, Jenkins, Maven, Cloudinary

Introspec & Reconciliation – Banking Ops Automation

Executed end-to-end testing for a reconciliation tool integrating with core banking systems. Uncovered 60+ critical edge case defects during UAT, leading to a 40% drop in production issues. Used Postman for validating backend logic across 25+ API endpoints and JIRA for streamlined defect tracking and sprint reporting.

Stack: Java, Spring Reactive Web, MySQL, Swagger, Jenkins, Maven, Cloudinary

SyncFinance – SME Financing Platform

Tested end-to-end workflows, including customer onboarding, disbursement, and repayment processes, to support structured business growth and financial performance. Developed and executed over 30 detailed test cases, and integrated API automation scripts into CI/CD pipelines, improving testing efficiency and accelerating release cycles. Played a key role in enhancing product quality, increasing bug detection in staging environments by 50%, and ensuring a secure, reliable, and high-performing system aligned with industry standards.

Stack: Java, Spring Boot, JWT, MySQL, Docker, Swagger, React Native, CI/CD, Nomba

Reerac – AI-powered Recruitment Platform

Developed and executed end-to-end test strategies for an AI-powered recruitment platform, validating key workflows including user onboarding, authentication, job posting, candidate applications, AI CV screening, interview management, and reporting. Authored and executed 30+ detailed test cases and performed functional, regression, UI, and API testing to ensure high product quality across multiple user roles. Collaborated with cross-functional teams to identify, document, and resolve defects, improving staging bug detection by 50% and ensuring the delivery of a secure, scalable, and user-centric recruitment solution.
